**Subject:** Bradford Island/Bonneville Dam

Hi Marian. I hope you are doing well and hanging in there!

I'm giving you a heads up that I directed Ken Marcy from EPA your way regarding an NPL listing petition and potential rule-making for the Bradford Island site at the Bonneville Dam complex. The upland contamination falls on the OR side, but they share the sediment contamination with Washington. WA Dept of Ecology has been fairly hands off (more in a monitoring the situation mode) until the past couple years. YN approached OR, WA, EPA, USFWS to work together to pressure the Corps to follow the CERCLA regs and guidance, acknowledge OR OAR cleanup regs and WA SMA regs as ARARs, fill data gaps, and work towards a more protective cleanup. Bradford Island has the highest PCB concentrations in resident fish (ex. small mouth bass) that we've seen in the entire PNW (ex. significantly higher than Duwamish or Portland Harbor, also PCB-driven sites). The area is actively fished by tribal and subsistence fishers, despite fish advisories by OR and WA health authorities.

In the past we worked with Jim Pendowski, Rebecca Lawson, and Pete Striplin, who have all moved on in various ways. So I directed Ken to you. I think he's on a fairly quick schedule for submitting the EPA package for the rule-making process. Thanks for your help!

Take care,

Laura Klasner Shira, P.E.
